

Modernize Your McQuay or Westinghouse Centrifugal Chiller with the Latest Controls

Now McQuay centrifugal chillers with MicroTech™ 100 and 200 panels, or Westinghouse chillers, can be upgraded to the latest in direct digital control panels, the MicroTech II™ unit controller—the ultimate unit controller to keep your chiller running efficiently and reliably.

Improved Energy Efficiency

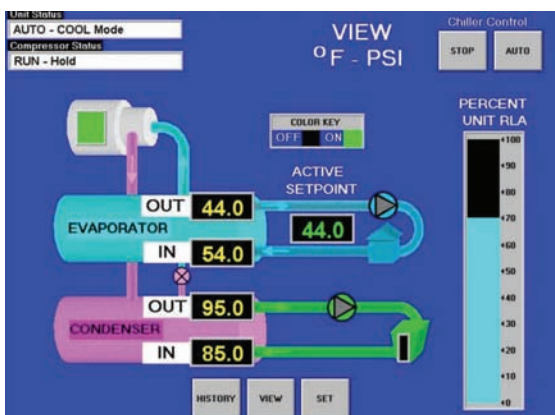

The graphical trending of the MicroTech II panel provides important operating data to help you control your chiller more efficiently to reduce energy costs.

Easy to Use Operator Touch Screen Panel

With the MicroTech II controller's touch screen panel, chiller operators can easily access status and troubleshooting information – at their fingertips. Control adjustments are done simply with the touch of a button.

Simplified Installation

By developing a complete, step-by-step, instruction manual and preconfiguring the controller, we've simplified installation – making it fast, cost-effective and trouble-free.

The information available on the MicroTech II touch screen panel provides a clear picture of chiller status.

Easy Integration

MicroTech II unit controls with our Protocol Selectability™ feature allow easy integration with your building automation system of choice using BACnet®, LONWORKS® or Modbus® communication networks.

MicroTech II Unit Controller Features for Increased Efficiency and Reliability

- Precise chilled water control for consistent, stable operation in chilled water systems.
- Proactive pre-alarm notification of unusual conditions allows the chiller to stay online and provide maximum possible cooling.
- Automatic control of chilled water and condenser water pumps for integrated lead/lag and automatic engagement of backup pump.
- Control of up to four stages of cooling tower fans and modulation of tower fan or bypass valve provides optimum integrated control of the tower based on system conditions.
- Alarms, along with the operating conditions at the time of the alarm, are saved in memory for trouble-shooting.

Call today and modernize your centrifugal chiller with the MicroTech II unit control panel.
